

Introduction

IT Medical Solutions is your e-MAR and EMR North American hardware solution specialist. We work very closely with several of the largest medical software developer companies both in Canada and the USA.

IT Medical Solutions can provide your facility, whether it be an independent GP's or Dentist's office, walk-in clinic, specialist clinic, Home Health Practitioner, LTC / Retirement facility or acute care location, with the most up to date technology that has been tested and proven in the medical industry.

With our partners, IT Medical Solutions can provide consulting, hardware, installation, training and 24/7 tech support for all of your hardware needs and requirements. This includes work stations, kiosk solutions, handheld and cart mounted mobile slate solutions with bar code scanning and imaging capabilities, servers and networking including highly skilled installation of wireless networks into medical facilities.

IT Medical solutions prides it's self on being at the leading edge of health care technology and constantly pursuing new and innovative solutions that will greatly assist the entire eHealth initiative. As the deadline for eHealth implementation rolls out across North America, IT Medical Solutions has the ability to work with existing software providers to bring the appropriate hardware technology and expertise into the facility at very competitive pricing. Our experienced consultants can do on-site surveys and provide estimates based on the precise needs and requirements for that specific facility. This is a very important service as no two facilities are built identically. It Medical Solutions will only recommend the hardware that will meet or exceed the requirements for that specific location.
